

# **Scotland Excel**

To: Executive Sub Committee

On: 10 February 2017

# Report by Director Scotland Excel

Tender: Engineering & Technical Consultancy

Schedule: 06/16

Period: 18 March 2017 until 17 March 2021

# 1. Introduction and Background

The current framework for engineering and technical consultancy will expire on 17 March 2017. This recommendation is for the award of a renewal framework which will operate from 18 March 2017 to 17 March 2021.

This framework will provide councils and other participating bodies a mechanism to procure a comprehensive range of engineering and technical consultancy services. This framework will provide an efficient method of engaging external consultancy for services commonly used across councils which in turn will realise benefits for both councils and consultants in terms of administrative savings and the adoption of best practice. The NEC 3 Professional Services Contract 2013 and the NEC 3 Professional Services Short Contract 2013 form the terms and conditions on which the councils will contract.

The report summarises the outcome of the procurement process for this national framework arrangement.

# 2. Scope, Participation and Spend

As part of the strategy development, the User Intelligence Group (UIG) endorsed the inclusion of seven lots as summarised in Table 1.

Lot No.	Description	Estimated % Spend through lot
1	Road and Structures	28%
2	Transportation and Traffic	33%
3	Environmental Engineering	4%
4	Land Surveying	3%

#### Table 1: Lotting Structure

5	Drainage and Flooding	22%
6	Geotechnical and Testing	3%
7	Project Management	6%

The lotting structure aligns with the various specialisms within the market and facilitates the participation of specialist SME consultants in the procurement process.

As detailed in Appendix 1, 30 councils have confirmed their intention to participate in this framework. The Orkney Islands has no requirement for these services and South Lanarkshire Council has its own contractual arrangement in place. In addition to this, Scotland Excel associate members (NESTRANS and SPT) have confirmed participation in this framework.

Notwithstanding the above and, to allow for potential migration from existing arrangements during the life of the framework, all 32 councils and associate members were included in the Contract Notice for this framework.

The historical annual spend for participating councils and associate members for these services is £11m. However due to the development of projects such as City Deal and additional funding for flood prevention being issued to councils the framework was advertised at £17m per annum. This seeks to capture any additional spend through the above mentioned initiatives and also future proof the framework by accounting for further potential funding streams. It should be noted that there is no guarantee of any business, any level of business or any continuity of business under the terms of the advertised framework.

# 3. Procurement Process

A Prior Information Notice (PIN) was published for this tender, on 18 July 2016. In total, 24 supplier meetings were held and these meetings helped inform the procurement strategy. During these meetings elements such as specifications, ability to service, market trends, community benefits and the inclusion of professional titles rates were discussed.

The UIG consisting of procurement and technical representatives from the participating councils endorsed the procurement strategy on 1 September 2016.

A working group of technical representatives from the councils was formed to review the technical specifications and establish the technical criteria to adopt during the tender process. The technical group also agreed on the inclusion of the NEC Professional Services Short Contract 2013 in addition to the longer version of the contract available under the current framework. This gives councils the option to select contractual terms appropriate to the value and risk of each project under the framework. It was also agreed that the framework pricing structure should be updated to include a number of professional title roles to enable easier cost forecasting and control. This group also played an integral role in evaluating technical responses from bidders. To ensure maximum competition, the UIG agreed that an open tender process should be followed to establish the renewal framework. The tender was advertised on the Official Journal of the European Union and the Public Contracts Scotland portal on 31 October 2016. The tender process was conducted using the Public Contracts Scotland Tender system (PCS-T).

The procurement process followed a two stage tendering procedure. Stage one, Qualification was conducted using the European Single Procurement Document (ESPD). Within the ESPD tenderers are required to answer a number of exclusionary questions along with questions on insurance, financial standing, quality management, health and safety and environmental management.

At the second stage of the process, the offers were evaluated against the following criteria and weightings:

- Technical 50%
- Commercial 50%

Within the technical section, bidders were required to evidence their knowledge and experience by responding to the main technical questions including how they will deliver the service and manage the service as well as what commitments they would make in respect to community benefits. In addition to these questions, lot specific technical questions were also asked in relation to bidder's technical merit, quality of work, innovation, legislation and sustainability.

Within the commercial section, bidders were invited to offer hourly rates for a range of clearly specified professional roles within each lot. As a minimum pricing was fixed for 12 months, however bidders had the opportunity to offer increased periods of fixed pricing of either 18 or 24 months. In addition to these rates for professional roles, bidders were required to offer hourly rates for a range of salary bands which would be fixed for the duration of the contract.

# 4. Report on Offers Received

The tender document was downloaded by 116 organisations, with 61 tender responses received. One response was non-compliant as the bidder (Aird Geomatics Limited) failed to submit a lot specific technical and commercial offer. This response was excluded from the evaluation and the bidder advised.

A summary of all offers received is provided in Appendix 2.

Based on the criteria and scoring methodology set out in the tender document, a full evaluation of the 60 compliant offers received was completed. Appendix 3 confirms the scoring achieved by each bidder.

# 5. Recommendations

Based on the evaluation undertaken, and in line with the criteria and weightings set out above, it is recommended that a multi supplier framework agreement is awarded to 27 suppliers across the seven lots as outlined in Appendix 3.

These 27 recommended suppliers offer full service and geographical coverage, best value and represent a mix of micro, small, medium and large organisations.

# 6. Benefits

#### Savings

Scotland Excel conducted a benchmarking exercise based on current spend forecast of councils, comparing current prices paid with the average rates suppliers submitted against the new framework, and the result of this benchmarking is detailed in Appendix 1.

The projected average saving across all councils is 4.1%, which equates to an estimated total saving of approximately £490k per annum. The projected savings per council ranges from 3.2% to 10.6%.

#### **Price Stability**

The salary banded rates are fixed for the full four year duration of the framework.

The framework terms mandate that the professional title rates are fixed for at least 12 months and limits future price increases to no greater than inflation. Of the 27 recommended suppliers, 20 have offered to fix their professional title rates for 24 months and one further supplier has offered to fix them for 18 months

#### **Sustainable Procurement Benefits**

A tender question was asked on community benefits. Scotland Excel asked for bidders to make commitments based on them attaining £200,000 of spend per annum through the framework.

Various types of community benefit commitments were made, most significantly in employment and training opportunities. The following is the accumulation of commitments from the recommended suppliers:

- The appointment of 19 apprentices and 13 graduates with relevant training schemes.
- Work placements for 23 school pupils, 17 undergraduates and 3 long term unemployed
- Holding career advice sessions, engineering workshops and industry advice sessions for both school pupils and college students.

Various charity commitments were also made with one supplier committing to donate 0.75% of their received accumulative spend to a charity selected by the council with the greatest overall spend contribution per annum.

Other commitments included supporting communities through volunteering and sponsorship, and developing SMEs in the engineering consultancy industry by increasing business to them.

# Fair Work Practices

Bidders were asked to confirm their approach to fair work practices and the Scottish Living Wage status. Of the 27 recommended suppliers, 24 pay the living wage or above to all employees (except volunteers, apprentices and interns) and one further supplier has agreed to provide this same commitment within the initial two year period of the Framework Contract.

The recommended suppliers also incorporate a number of other initiatives to support their workforce, most notably:

- 19 suppliers offer flexible working,
- 8 offer childcare support,
- 5 have arranged development schemes for graduates,
- 4 offer development programmes for all staff and;
- 3 hold an Investors in People award.

Scotland Excel includes monitoring Fair Work Practices including the Living Wage within its contract and supplier management programme. Scotland Excel will work with all awarded suppliers who have not yet pay the Living Wage Foundation to encourage them to achieve this.

# 7. Contract Mobilisation and Management

In accordance with Scotland Excel's established contract and supplier management programme, this framework has been classified as a level 2 arrangement in terms of both risk and spend requiring as a minimum annual supplier meetings. The UIG will be convened on a regular basis throughout the framework period.

Scotland Excel will host an event in March/April to mobilise this framework to user Councils. In addition, suppliers and councils will be issued with a mobilisation pack containing all required details to launch the framework.

As part of regular contract management, commitments to community benefits will be managed and reported on a six monthly basis.

# 8. Summary

This framework for Engineering & Technical Consultancy aims to maximise collaboration, promote added value and deliver best value. A range of benefits can be reported in relation to savings, price stability and community benefits.

The Executive Sub Committee is requested to approve the recommendation to award this framework agreement as detailed in Appendix 3.
